

***Hantzschia nana* Rybak, nom. nov. (≡ *Hantzschia minima* Rybak, nom. illeg.; Bacillariaceae, Bacillariophyta)**

Mateusz Rybak, *University of Rzeszów, Department of Agroecology and Forest Utilization, Ćwiklińskiej 1a, 35-601, Rzeszów, Poland* (correspondence: matrybak91@gmail.com)

Natalia Kochman-Kędziora, *University of Rzeszów, Department of Agroecology and Forest Utilization, Ćwiklińskiej 1a, 35-601, Rzeszów, Poland*

Rybak & al. (2022) described and illustrated five *Hantzschia* taxa including four new species from terrestrial habitats of southeast Asia, making a significant contribution to the diversity of terrestrial diatoms in this tropical area. However, one of the newly introduced species names is a later homonym of *Hantzschia minima* Frenguelli (1938: 294), a fossil. We therefore propose to replace this name as follows

***Hantzschia nana* Rybak nom. nov.**

Replaced synonym: *Hantzschia minima* Rybak, nom. illeg. *Phytotaxa* 567(3): 209, figs 1–15 and 46–52, 2022; non *Hantzschia minima* Frenguelli *Revista del Museo de la Plata Nueva Serie 1 (Sección Paleontología No. 5)*: 294, 304, pl. I [1]: fig. 24, 1938.

Description and illustrations: Rybak & al. 2022: 209, 211, 212, figs 1–15 and 46–52.

Type locality; Indonesia, Kairatu, West Seram, Maluku, -3.362917, 128.372078; 28 June 2018.

Phycobank Registration: <http://phycobank.org/103398>

Holotype: slide no. SZCZ28484! and unmounted material with the same number at the Szczecin Diatom Collection (University of Szczecin, Poland).

Isotype: slide no. 2018/445 and the unmounted material with the same number at the University of Rzeszów, Poland. The type population is illustrated on Figs 1–15 and 46–52.

Etymology: The new name refers to the species size.

We are grateful to Michael Guiry for bringing this to our attention.
